WHY TOMMY TAPE?

BECAUSE.....

- its self-fusing, “non-sticky” properties make it easy to use;
- with its 300% elongation it will literally stretch and “form-fit” around any odd configuration;
- fuels, oils, saltwater and other contaminants won’t touch it;
- it can withstand extreme temperatures (-60° to 500° F);
- its good dielectric strength(12,000 volts).

Tommy Tape self-adhering silicone tape fuses to itself in 24 hours creating an air and water-tight bond. Not only is the tape waterproof, but it may be applied underwater. The tape wraps on virtually any electric connection, from extension cords and battery terminals, to radio and Loran connections. Diesel fuel, oils or saltwater cause no harm to the tape making a “no-goo” remedy for whipping the ends of ropes, cables or winch handles. Other uses include emergency hose repairs, tool grip wraps, sport equipment grip wraps, jumper cable insulation and more. Everyone uses tape, so we all know that duct tapes and electrical tapes turn gooey in extreme heat and also crack and peel in cold weather. **Tommy Tape will NOT!**

Tommy Tape comes in 1/2", 3/4", 1", 1 1/2", 2" sizes and thicknesses ranging 10 to 50 mils. The tape also comes in a variety of colors: Red, Black, Orange, Blue, Grey, Yellow, Green, Clear and Glow in the Dark. Vibrant assortment of: Vibrant Red, Vibrant Green, Vibrant Yellow, Vibrant Orange and Vibrant Blue.
